Etere Provides a Free Upgrade of the Ross MC1 Driver that Supports also IP Technology
Etere is a brand that is known for a high level of interoperability and innovation. As part of its service commitment, Etere releases regular updates and upgrades, including those that expands its interoperability with third-party solutions. Etere announces a free upgrade of the Ross MC1 driver that supports IP technology for its customers. The Ross MC1 control panel is customizable and supports scalable multi-channel operations.

The Limitation of Ross IP Interface
Ross MC1 now supports IP control besides Rs422. However, the system has a limitation of running only one connection at any point of time. This limitation makes it unsuitable for use with a Main and Clone Automation system.

An Alternative Solution
The IP interface of Ross is compatible with a main BKP system. Etere recommends its customers to use and design a Rs422 control for their Main and Clone Automation system as well as to use the IP with no redundancy and main Backup. This is an alternative solution until Ross releases an upgrade that enables a full IP control connection.

About Etere

Etere was established in 1987 in Italy and it is amongst the worldwide leaders in Media Asset Management (MAM) and channel-in-a-box software solutions. Etere Media Enterprise Resource Planning (MERP) framework of scalable solutions are used by media enterprises across the end-to-end workflow.
